DETAILED ACTION

1. Applicant's amendment dated October 29, 2007, responding to the Office action mailed July 27, 2007 provided in the rejection of claims 1 and 3-20, wherein claims 1, 10 and 15 have been amended.

Claims 1 and 3-14 are allowed.

Claims 15-20 remain pending in the application.

Claim Rejections – 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 15-20 are rejected under 35 U.S.C 101 because the claims are directed to non-statutory subject matter.

3. **As to Claim 15**, recites "a computer-readable medium embodying a compiler" to include "a computer data signal embodied in a carrier wave" in communication media, e.g., *electromagnetic waves* in P. 20, lines 21-23 in the specifications. Signals and carrier waves do not fall within any class of statutory subject matter, and thus the claim is not limited to statutory subject matter. Please see Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility (1300 OG 142), Annex IV, Section (C) for details.

4. **As to claims 16-20**, they do not cure the deficiency of base claim 15, and also are rejected under 35 U.S.C. 101 as set forth above.

Allowable Subject Matter

5. Claims 1 and 3-14 are allowed.

6. The following is an examiner's statement of reasons for allowance:

As pointed out by Applicant, the prior art of record fails to teach and/or suggest "in a first phase of compiling process, the compiling process comprising a front-end phase, an inter-procedural analysis phase in which cross-module analysis is performed on a plurality of modules, and a back-end phase in which the plurality of modules are processed individually, the inter-procedural phase being the first phase; determining to in-line a first function in a first module into a second function in a second module but not performing said in-line during the first phase; providing the location of the first function; providing instructions for in-lining to be performed in a second phase of the compiling process; in the second phase of the compiling process, the back-end phase being the second phase, following the instructions to in-line code of the first function into the second function in the second module without accessing the first module", as recited in independent claim 1 and similarly recited in independent claim 10. (Remarks, pages 7-9)
